

Sreekara Rao Karanam

Data Engineer

Chandler, Arizona

3132472612

karanamsreekara273@gmail.com

Professional summary

Data Engineer with 6+ years of experience in crafting scalable data solutions across both cloud and on-premises platforms, utilizing expertise in SSIS, SSRS, SSAS, Databricks, Snowflake, and Azure. Demonstrates a visionary approach to building robust ETL pipelines and optimizing SQL workloads to drive operational efficiency and cost savings. Skilled collaborator, translating complex business requirements into innovative technical solutions while ensuring data quality and governance.

Employment history

November 2025 - Present

Data Engineer, Medzown

- Developed **ETL** pipelines using **Databricks** (dbx) to process and transform large-scale datasets for analytics and reporting use cases.
- Build and managed dbt models to create standardized, reusable transformation layers, implementing data quality checks and documentation best practices.
- Wrote and optimized complex SQL queries (CTEs, window functions, aggregations) to support data integration, reporting, and performance-sensitive workloads.
- Integrated data pipelines with **AWS** services (such as S3 and IAM) to enable secure, scalable cloud-based data processing.
- Support downstream analytics and reporting by delivering curated datasets consumed by Power BI and other reporting tools.
- Collaborate within **Agile** teams using Scrum and Kanban methodologies, managing tasks, stories, and defects through Jira boards.
- Use **Git-based** version control to manage data engineering code, ensuring proper branching, reviews, and release practices.
- Work closely with business stakeholders to translate data requirements into reliable, scalable data models and pipelines

Dec 2024 – October 2025

Cloud + AI Consultant, Taylor Farms

- Wrote SQL queries and created reporting views using **Databricks**, working with structured data from multiple datasets to support operational reporting.
- Implemented business logic in SQL views, including shift differentials, crew derivation, and worker classifications as per reporting requirements.
- Published completed views to **Power BI Report Builder** for SSRS-style reports with dynamic parameters and data filtering.
- Accessed and reviewed existing SSRS reports through **Citrix** using the **SSRS Reports EDGE** app to map report elements to data sources.
- Used **Azure DevOps** to track assigned tasks, maintain workflow status, and ensure all views adhered to naming conventions and storage guidelines.
- Reviewed embedded SQL from legacy SSRS reports to reverse-engineer logic and ensure accurate view creation in **Databricks** for report replication.
- Developed **Power BI dashboards and KPIs for supply chain and production performance**, enabling leadership to make data-driven decisions on cost optimization and quality improvements

Jul 2024 - Dec 2024

Data Engineer, Tricubic INC

- Built robust **ETL** pipelines using **Azure Data Factory**, **Databricks**, and **Airflow** to process and orchestrate data workflows across cloud and on-premises sources, ensuring scalability, reliability,

and efficient data movement.

- Configured and managed **Databricks Jobs** and clusters for automated data processing, performance optimization, and cost efficiency; implemented real-time data ingestion using **streaming tools** like Kafka and Spark.
- Designed end-to-end **data workflows** in **Airflow**, creating custom operators and implementing alerting mechanisms for failed tasks to ensure seamless execution and transparency.
- Developed and optimized data transformation processes using **PySpark** and **SQL** in **Databricks**, applying validation checks, performance tuning techniques, and reusable code modules for scalability.
- Used **Jira** and **Bitbucket** in an **Agile** environment to manage tasks, track bugs, and maintain version control; linked code commits to Jira tickets and actively participated in sprint ceremonies for project alignment.
- **Developed and executed test cases for ETL pipelines and PySpark transformations**, ensuring data accuracy and integrity across staging and production environments.
- **Collaborated with QA teams to perform regression and functional testing** on data workflows, validating job dependencies and schema evolution.

May 2021 - Aug 2022

Assistant System Engineer, Tata Consultancy Services

India, Hyderabad

- Migrated enterprise data into **Snowflake**, ensuring accurate, high-volume data transfer with robust **SQL-based validation**, anomaly detection, and minimal downtime across environments.
- Designed and managed **Snowflake objects** such as databases, schemas, tables, views, and stored procedures to support scalable and modular data workflows.
- Developed and scheduled **Apache Airflow DAGs** to automate ETL processes, integrating with **Snowflake** for seamless job orchestration, logging, and error handling.
- Utilized **Jira** and **Confluence** for sprint planning, story tracking, documentation, and cross-functional collaboration, maintaining visibility and traceability across teams.
- Participated in **CI/CD pipelines** through **Azure DevOps**, contributing test automation, performing code reviews, and promoting best practices in SQL and pipeline design.
- Designed and managed Snowflake objects such as schemas, tables, views, and stored procedures.
- **Integrated CRM (Salesforce) datasets into Snowflake pipelines**, enabling unified customer reporting across regions.
- **Automated reporting workflows for CRM sales and marketing analytics**, improving visibility into customer interactions and engagement metrics.

Jan 2020 - Apr 2021

Software Engineer, IBridge TechSoft

India, Hyderabad

- Developed and optimized complex SQL queries, stored procedures, and SSRS reports in Microsoft SQL Server, enabling efficient data extraction, reporting, and business process automation.
- Improved ETL performance and reliability by designing workflows in **SQL Server Integration Services (SSIS)**, tuning queries, and implementing indexing strategies across large-scale relational databases.
- Enhanced data retrieval speeds by 35% through the development of **OLAP cubes and tabular models** using **SQL Server Analysis Services (SSAS)**, supporting faster and more insightful analytics.
- Documented ETL pipelines, stored procedures, and data models in **Confluence**, and maintained version control and deployment pipelines using **Git**, ensuring better collaboration and maintainability.
- Worked in **Agile teams** using **JIRA**, actively participating in sprint planning, retrospectives, and daily stand-ups, while managing SQL/reporting tasks and release workflows across **development, staging, and production environments**.

Skills	API Development	Data Migration	Python
	SQL	Databricks	Snowflake
	Pyspark	Apache Airflow	Apache Spark
	Power BI	SSIS, SSRS, SSAS	Azure

Education

Sep 2022 - Apr 2024	Master Of Science University Of Michigan, Michigan, Dearborn
---------------------	--

Certifications

- ◆ Databricks Certified Data Engineer Professional
- ◆ Databricks Generative AI Fundamentals
- ◆ Python Data Structures
- ◆ AWS Certified Data Engineer – Associate
